 Santa casa da Misericórdia de Aveiro
 Fundação CESDA
 Centro Social Santa Joana Princesa

ABSTRACT

The project "SEDUCE" main goal is to assess the impact of non-cognitive effects¹ through the use of ICT among senior citizens in the social context of online social community and to build one with the participation of senior citizens.

This project also aims to help and promote a better quality of life of seniors in the Portuguese national reality.

The impact study will assess the non-cognitive effects through a comparative study of the emotional variables such as, the Philadelphia Geriatric Moral Scale, the self-concept and Quality of Life before and after the use of ICT by senior citizens integrated in an online social community.

¹ PHILADELPHIA GERIATRIC MORAL SCALE, THE SELF-CONCEPT AND QUALITY OF LIFE

TASK LIST

1. assess non-cognitive measurements and ICT use in the focus groups
2. **planning online community and sociability**
3. **prototype implementation and test with sociability and usability adjustments**
4. **develop dynamics and strategies for social online community nurturing and consolidation**
5. assess comparatively different focus groups after project involvement
